

## End of Life Product Disposal and Recycling Policy

### Disposal. Environmental Regulation

- Lithium-ion batteries are not specifically discussed in the Federal Resource Conservation and Recover Act (RCRA).
- However, given the general requirements for hazardous materials, a completely discharged lithium-iron-phosphate cell is considered non-hazardous material. States and cities may have more stringent regulations in place, some of which designate all lithium-ion batteries as hazardous waste, while others classify them as conventional waste.
- OneCharge Zero Cost Disposal guarantee ensures full compliance with laws and the highest environmental standards.

### OneCharge Zero Cost Disposal Guarantee

- At the end of useful life\* of any OneCharge battery OneCharge Inc. will collect such battery from the place of original battery installation at no charge and/or credit to the battery owner.
- OneCharge will disassemble the collected battery and will process the decommissioned lithium-ion batteries in compliance with the then current regulation for disposal of such batteries and other environmental regulations.
- OneCharge will provide documentation necessary to track proper disposal on any collected batteries.

---

\* - upon expiration of original battery warranty and for a period of 18 months following such expiration. After expiration of such period OneCharge will collect the battery at the then current rates for disposal, which will include appropriate freight charges
